WHY CONCRETE AND CLAY TILE?

LOCALLY MADE IN CALIFORNIA

US Tile® has been serving California home builders, HOAs and homeowners with affordable, attractive and long lasting roofing solutions since 1964. We offer an extensive range of colors and styles to complement any architectural design. Unique profiles include Madera, a cedar shake replacement with a rustic, wood appearance; traditional low profiles slate and shake; Mediterranean Villa; and Spanish mission barrel.

1 UNMATCHED LIFESPAN

While asphalt shingles may need to be replaced multiple times over the life of a home, a well-maintained US Tile roof is built to last for decades, helping reduce replacement costs and lower total cost of ownership over time.

2 FULLY TRANSFERABLE WARRANTY*

US Tile offers one of the most comprehensive, fully transferable tile roofing warranties. Other roofing materials may have prorated, non-transferable warranties that lose value over time.

3 ENERGY SAVINGS

As energy costs rise, tile roofing delivers superior efficiency, insulating homes to reduce attic temperatures and lower heating and cooling demands for considerable cost savings. Meets California's Title 24 energy standards.

4 ENERGY EFFICIENCY VS ASPHALT

US Tile absorbs less heat than traditional asphalt and can be paired with the Westlake Royal™ Cool Roof System to reflect sunlight and optimize roof ventilation against intense California temperatures.

5 ADDED HOME VALUE

Compared to standard asphalt shingles, a quality US Tile roof can be viewed as a premium home asset, helping enhance appraisal and resale value through lasting durability, elevated curb appeal and strong long-term performance.

6 POTENTIAL INSURANCE SAVINGS

Classifications achieved against Fire, Hail and Wind may help reduce insurance premiums or attain performance rebates. Consult your insurance carrier, roofer or energy provider for exact rates.

7 WILDFIRE PROTECTION

Clay and concrete tiles are non-combustible, offering critical protection required in California's Wildland-Urban Interface (WUI) zones. When installed to design standards, US Tile roof systems achieve Class A Fire Rating, the highest rating available.
